An Empirical Study on Evaluation Differences of Community Residents on Organizational
Influence Factors of Community Governance

—An Analysis based on 568 Questionnaires

Development, Peking University, Beijing 100080, China)

Abstract: Community organization is a very effective carrier of community governance. The effect of community governance is directly related to the ability of community organizations to form a cohesive force and play a role effectively. In this paper, based on the data of 568 questionnaires, the evaluation differences of community residents on organizational influence factors of community governance are analyzed from five aspects of the organization support of community governance, the organization degree of the community residents, the residents' committee representativeness of residents' interests, the policy makers of important public affairs, and internal differences of community residents. In a new era for innovations relating to the system, the mechanism, and the mode of community governance, and from the needs of community governance to social organizations, the development of social organization is not enough, which needs to further strengthen the role of social organizations in community

governance. Therefore, on the one hand, in the work of community governance, more social organizations should be introduced; on the other hand, the power of social organizations should be continually strengthened, to make social organizations play a better role in community governance.

Key words community residents; community governance; organizational factors; social organizations
