Research on the Path of Low-carbon and High-quality Development in Beijing from the Perspective of “ Double Carbon ” Goal

LU Xiaocheng TANG Junhui

1. Institute of Urban Issues Beijing Academy of Social Sciences Beijing 100101 China
2. School of Public Administration Xiangtan University Xiangtan Hunan 411105 China

Abstract Beijing has always been at the forefront of the country in terms of green and low-carbon development playing an exemplary demonstration and leading role for the national carbon peak and carbon neutralization. In Beijing’s low-carbon and high-quality development and the realization of the “ double carbon ” goal there are some problems. To accelerate the realization of the “ double carbon ” goal Beijing should accelerate the construction of an incentive mechanism for carbon emission reduction actively develop green and low-carbon energy vigorously develop low-carbon industries encourage cooperation between low-carbon consumption and carbon emission reduction take the lead in achieving the goal of carbon neutralization and write a new chapter in the low-carbon and high-quality development.

Keywords carbon peak carbon neutralization low-carbon and high-quality development development path
