Research on the Path of Low-carbon and High-quality Development in Beijing from the Perspective of "Double Carbon" Goal

LU Xiaocheng TANG Junhui

- 1. Institute of Urban Issues Beijing Academy of Social Sciences Beijing 100101 China
- 2. School of Public Administration Xiangtan University Xiangtan Hunan 411105 China

Abstract Beijing has always been at the forefront of the country in terms of green and low-carbon development playing an exemplary demonstration and leading role for the national carbon peak and carbon neutralization. In Beijing's low-carbon and high-quality development and the realization of the "double carbon" goal Beijing should accelerate the construction of an incentive mechanism for carbon emission reduction actively develop green and low-carbon energy vigorously develop low-carbon industries encourage cooperation between low-carbon consumption and carbon emission reduction take the lead in achieving the goal of carbon neutralization and write a new chapter in the low-carbon and high-quality development.

Keywords carbon peak carbon neutralization low-carbon and high-quality development development path
